- Discharge and metering units
- Bag emptying devices with or without dust filter
- Empty bag compressors
- Continuous and discontinuous mixer
- Dryers for granules
- Cutting mills
- Big-Bag Filling and emptying units
- Complete plants

Big-Bag unit with upper framework, adjustable in height, with automatic Big-Bag tension device

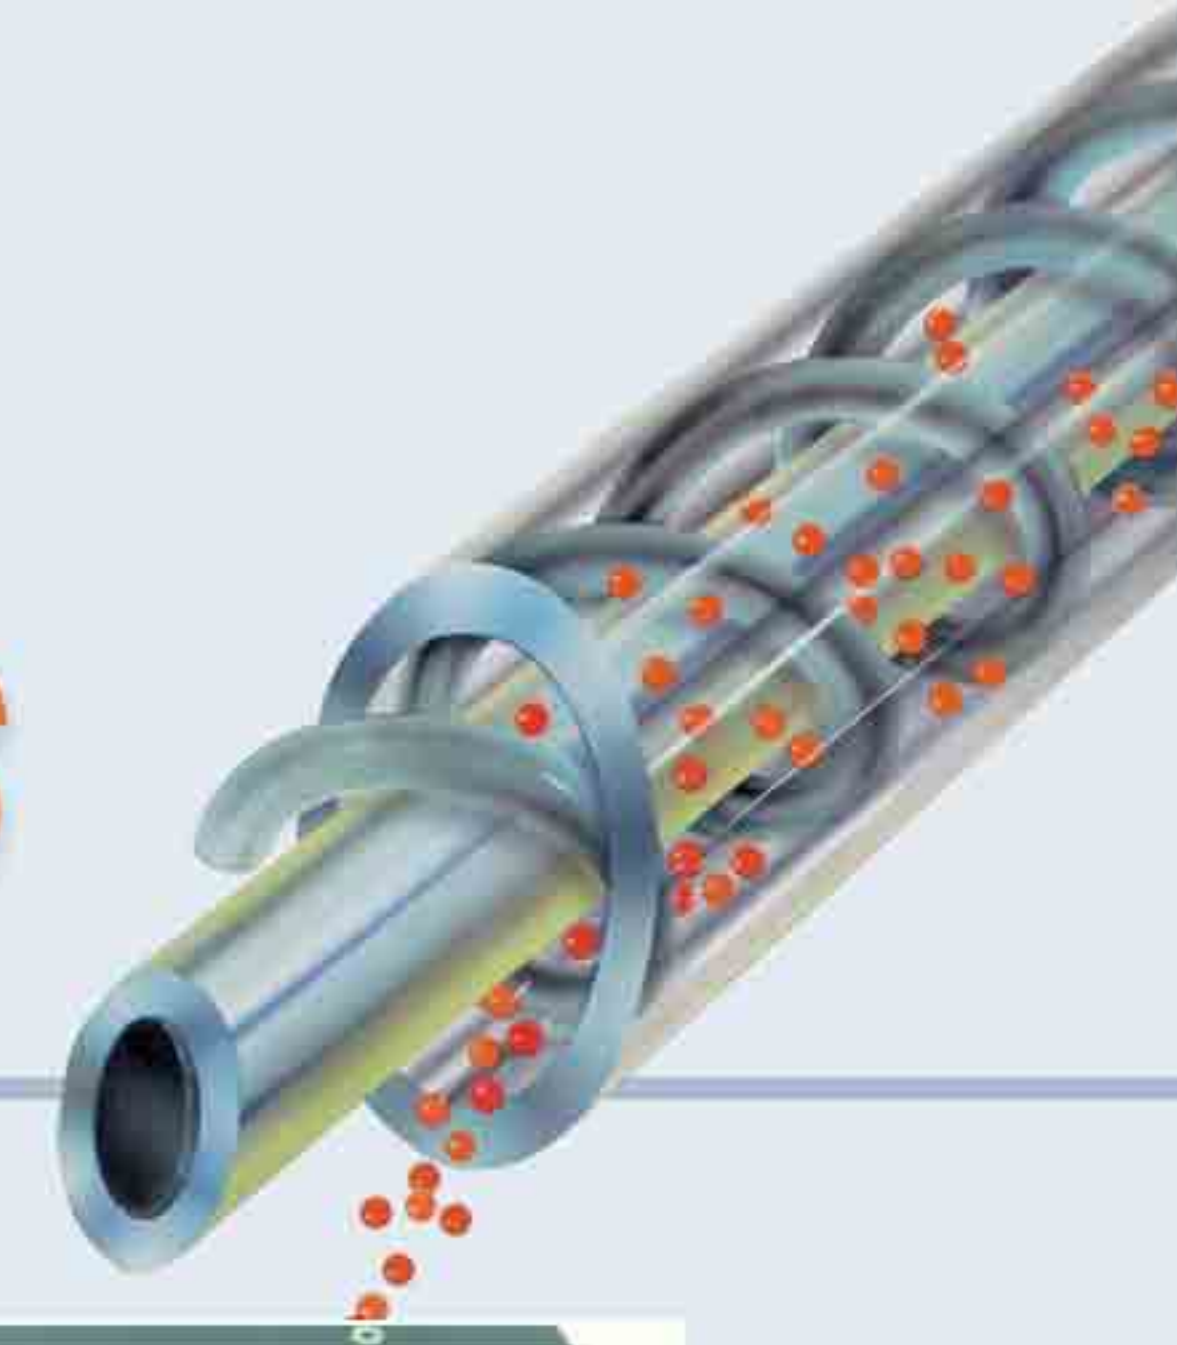

The Big-Bag will be hang up within the emptying station using a forklift.

By loosing weight during the emptying process, the Big-Bag will be tensioned automatically by a telescoping spring system.

Big-Bag emptying station with integrated travelling trolley, to lift and to drive the Big-Bag into the station

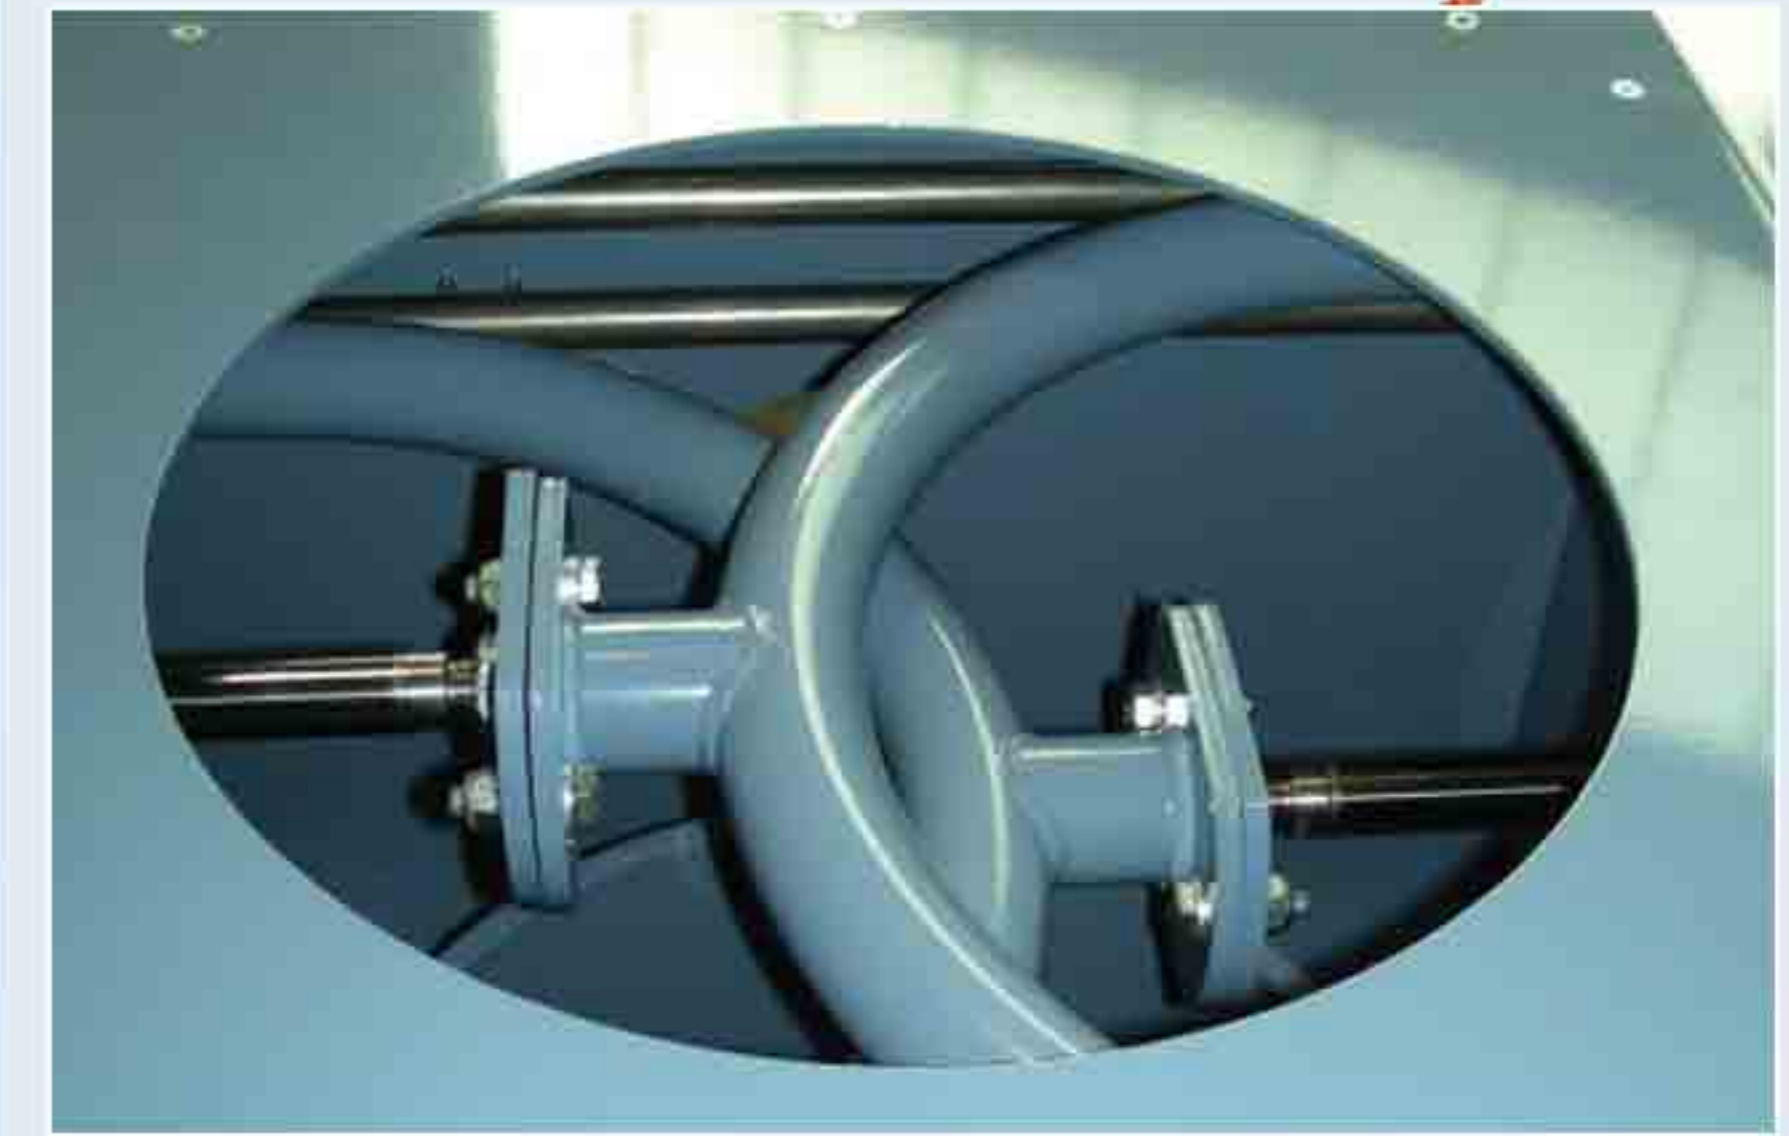

Accessories and Options

Big-Bag cruciform with device for automatic spooling of the Big-Bag inliner

Big-Bag cruciform with forklift sleeves

Spout closure system for dust-free Big-Bag handling. For closing partially discharged Big-Bags

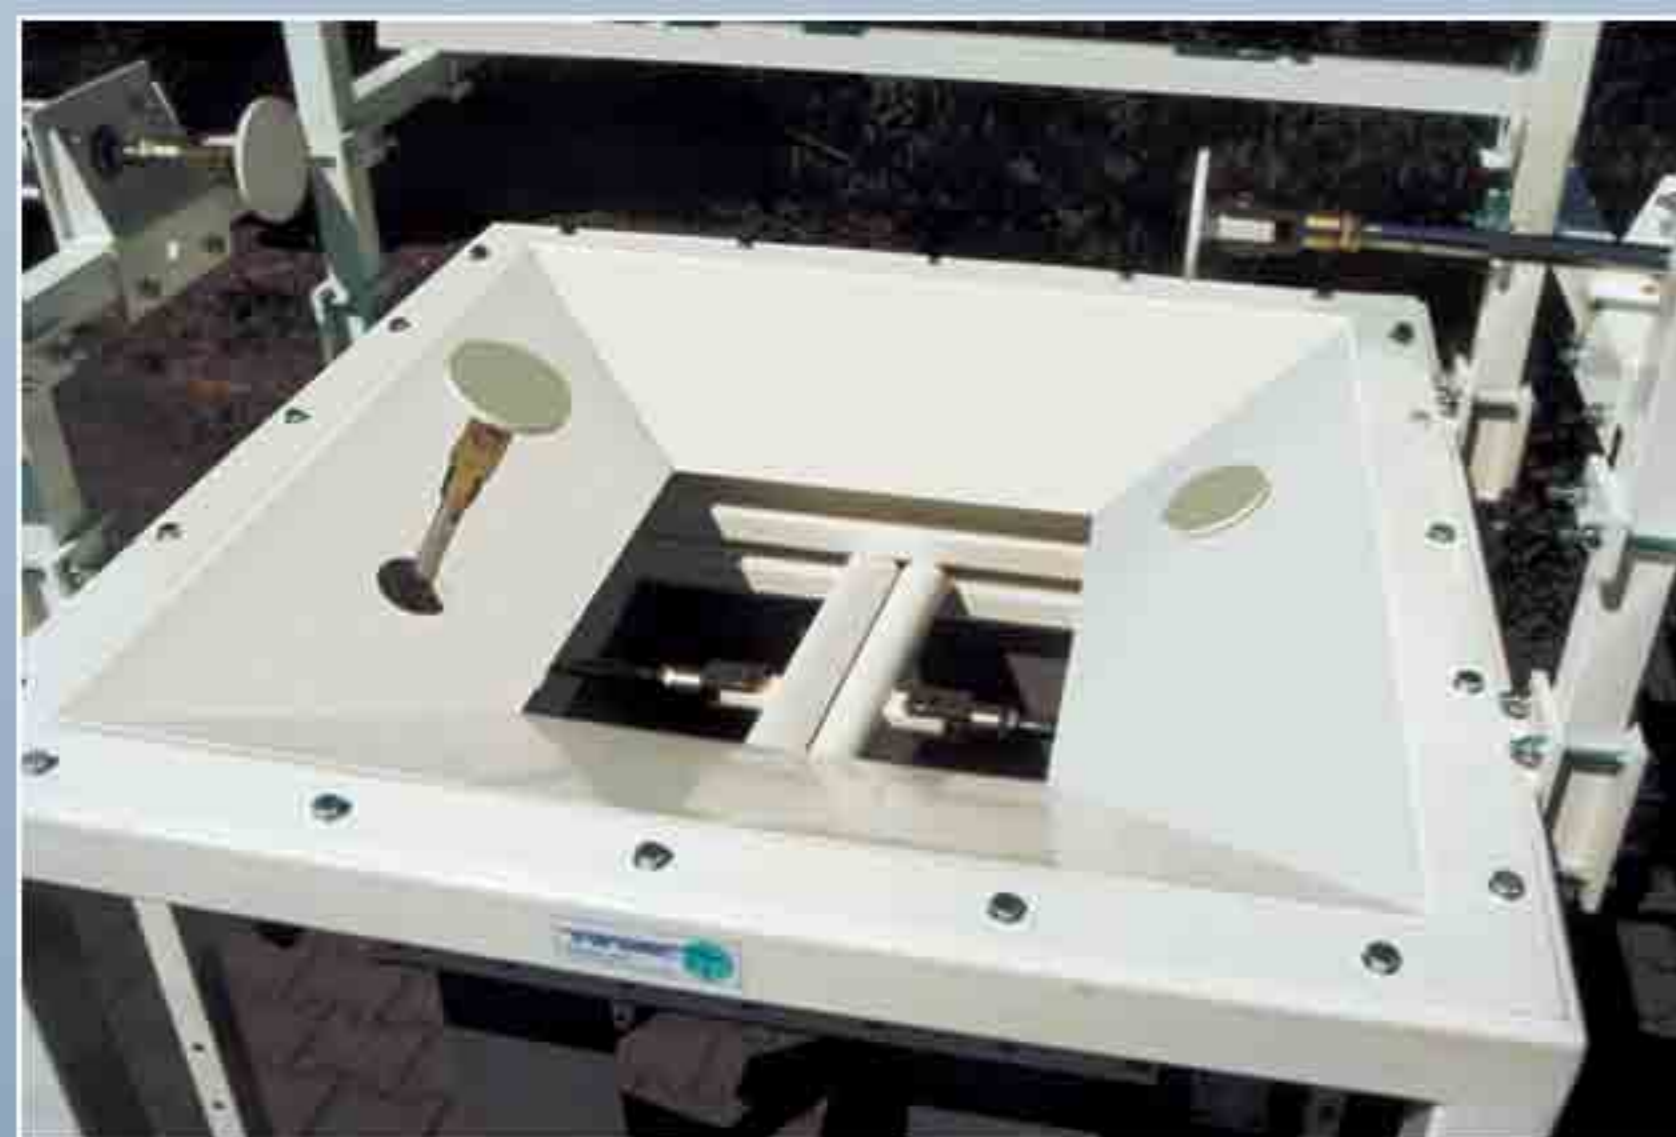

Device to clamp the outlet spout of the Big-Bag

Vibrating Big-Bag bottom support with dampers

External electric vibrator for Big-Bag bottom support

Massaging of Big-Bag by 2 pneumatically operated cylinders to enhance the discharge of poor flowing materials

Big-Bag Emptying station with additional chute for emptying sacks

Collecting hopper type DZR for bad flowing and bridge building bulk materials – cylindrical hopper with flat bottom and rigid rotating blades.

Material collecting hopper type FW with agitator

Material collecting hopper type RF for good flowing bulk materials – combined with spiral conveyor type FR
