Feed the baby car seat belt socket through the hole of the BABI smart pad and be sure that the BABI logo is facing upwards as per Fig. 1.

Fig. 1

## PRODUCT REGISTRATION AND SETUP

- Download the BABISIT APP available on both IOS and Android via their APP stores. OR it can be downloaded by scanning the QR code below:

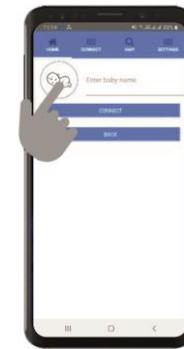

- When the APP is launched the menu shown below will be displayed. (Note: on some Android phones it may be necessary to turn on the Auto start and Show on lock screen permissions)

- To register an infant press the icon as shown below. Note up to 4 infants can be registered and monitored by phone App.

- Insert the Infants name, then press the infant icon to place a photo of the infant.
- A photo can be taken of infant or a photo from your gallery can be selected.

- The infants photo and name are displayed.

- To connect App to the BABI smart cushion Press on the BABI Logo on the smart cushion as shown below and wait for single beep to sound.

Keeping the cushion pressed down, after the beep Press the connect bar as shown below. The cushion connect to the App.

- Once connected to the App and paired to the cushion, it will sound once more.
- The infant's photo and name will be displayed along with a battery charge level indicator of the connected cushion.

- The battery charge indicator will change color as battery charge lowers. When the battery is critically low this icon will become red. Whenever the sounder sounds 4 times, it is an indication that the battery needs replacing.
- To complete the APP setup, press the Settings icon on top right corner here it is possible to enable the vibration, the intermittent flashing light and to select a preferred alarm tone.

### TO ADD ASSOCIATED USERS

- Once smart cushion is connected to the App the master user presses CONNECT as shown below.

- On the main user App, press the "SHOW MY QR CODE" bar the device's unique QR Code will be displayed.
- On the associated users phone press the "SCAN USER QR CODE" bar then their App is synchronized with the main user App allowing the associated users to receive an alarm alert notification message with GPS coordinates when the infant has been abandoned.
- The names of users are registered and are displayed on the master users App.

### USING THE PRODUCT

The main screen shows the status of the smart seat cushion.

- If the infant is not on the BABI smart seat pad, the infant picture is shown in black and white.
- When infant is on the BABI smart seat pad, the infant picture is showed in color.

Infant NOT in seat.

Infant is in seat.

- The BABI smart seat pad keeps connected to the APP and monitors the presence of the infant.
- When the infant is taken from the baby car seat, the smart pad will switch power off and will be power up again when an infant is again placed on the baby car seat.
- When the infant is abandoned in a vehicle and the guardian walks away from the vehicle, after a distance of 10 to 15 meters, the guardian will receive an alarm message on his phone, for example "ATTENTION! (NAME) HAS BEEN ABANDONED". The phone will emit an audio alarm sound, vibrate and flash the camera led.
- If the alarm is not resolved, after 30 seconds the APP will send an alarm message to all the associated users for example: "(NAME) WAS ABANDONED AT GPS 22 3213 N 113 9433 E"
- The associated users can open the map to view the exact location where the infant has been left unattended. See Fig 2
- Then they can contact the other users to proceed with the rescue of the infant that is unattended.

- Map showing the exact position of the unattended infant that is abandoned.

## BABI ACCESSORY PRODUCTS

BABI Smart Cushion has two accessory products that both work together with or without the phone App.

**BABI SAFE** – A in car alarm device that plugs in to the 12 Volt connector.

**BABI ALERT** – Is a Key Ring Device.

The **BABI SAFE** when used with or without the Babisit mobile phone App will have the same function. It is a pre-emptive reminder that will sound an alarm and display a visual alert when the car engine is switched off and an infant is present in the baby car seat.

If **BABI ALERT** however has a different. Use when used with the App and when used without the App.

**WITHOUT THE APP:** the BABI ALERT device will act as an alarm when the user moves away from the vehicle and has left an infant unattended in their baby car seat. The alarm can only be stopped by removing the infant from their baby seat.

**WITH THE APP:** the product is a alarm device that will sound in the event that the user has left their mobile phone in the vehicle with the infant unattended in their car seat In this case an audio and visual alarm is raised on the device and will only be stopped once the infant has been removed from its seat.

If the infant is not removed then an alert message will be sent to the other preset associated users with the GPS coordinates of where the incident occurred.
