#### **▶**Introduction

Dear Customer,

EAE Elektrik A.S. Products are designed to provide the maximum benefit in efficiency and service. Our products are manufactured in accordance with IEC standards and EAE is quality assured to ISO 9001 standards in their modern production plants in Istanbul.

The components that you have purchased are manufactured by a completely environment conscious, that is ISO 14001 certified.

These instructions should be read carefully and acted upon before taking delivery of equipment on site

Handling, installation and operation of busbar systems should be carried out only by skilled, trained and authorized personnel using all associated equipment such as rubber gloves, helmet, safety glasses or face shields and flash resistant clothing in accordance with established safety practices.

The busbar system's successful operation depends on correct handling, installation, operation and maintenance. Improper installation may cause personal injury and the failure of the busbar system and damage to other property.

# **▶** Unloading, Handling and Storage of Products

#### **Unloading:**

- Forklift is the most reliable and easiest method for the unloading of the products from the container or the truck arriving at the worksite.
- Utmost care is required to be exercised to ensure avoidance of any harm that can be sustained by the products during the unloading process.

#### Storage:

- From the packing list check the number of pallets received, the number, dimensions and the condition of the busbar lengths. Advise any discrepancies immediately to the local EAE representative.
- All products should be stored in a dry environment. The casting materials for the joint must be stored at a temperature between 5 °C and 25 °C and not exposed to direct sunlight

#### **Handling:**

- Do not handle the materials using steel ropes or hooks. As shown in the cast resin busbar should be lifted using lifting straps placed at each end of the busbar length.
- Short modules may be lifted using a single strap providing that the piece is balanced.
- A wooden spacer should be used every 1.5m when storing the lengths placed on top of each other.
- Do not stack more than 5 modules on each other horizontally.

#### ► Joint Area General Information

#### **Joint Area Processing and Casting:**

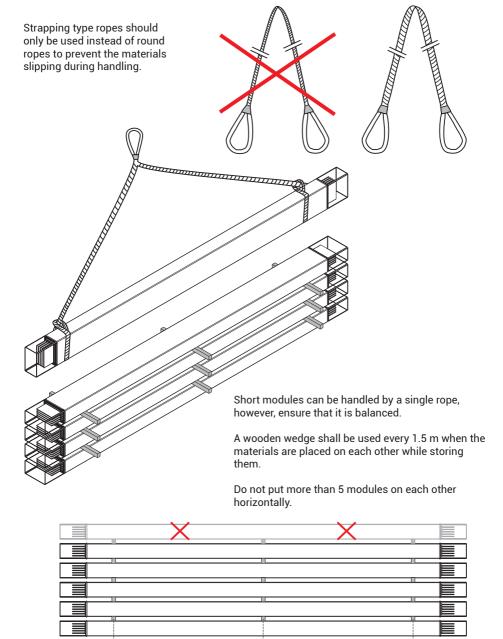

- · Wait for a while before process.
- For vertical applications the mould sides should be tightened or supported to prevent the mould slipping down.
- Type C hardener shall be used if the ambient temperature is 5 to 15 °C; and type B shall be used if the ambient temperature is 15 to 35 °C.
- The expiry dates of the resin and hardener should be checked. They should not be used if the expiry date has passed.
- · Ensure that the sand additive is drv.
- The mixture should be stirred for at least 5 minutes until thoroughly mixed.
- The mixture should be poured into the joint to the top of the mould, it should not be allowed to overflow.
- Joint moulds may be removed after 3 hours at 25 °C, 4 hours at 15 °C and 6 hours at 5 °C.
- Inside of the joint mould material shall be cleaned with a cloth; do not use a solvent or a metal cutting tool.

#### **Pre-Cast Controlling of Juncture Area:**

- The final check form supplied should be completed for each busbar joint installed.
- Perform a megger test after each joint, and ensure that there is no problem on the joint area.
- In order to prevent damage to the terminals and transformers during this test, remove their connections or protect them.
- After every electrical test, the system must be discharged to earth.
- After completing all electrical tests, make the terminal, MCCB and fuse connections again.
- The form filled in after each test should be submitted to the EAE representative. The product quality approval form (186) should be completed and submitted to us to validate the warranty.

1500 mm

# **▶** Handling and Hanging

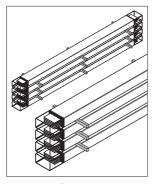

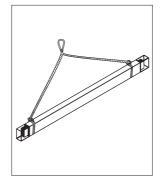

#### Introduction:

This installation manual includes the details of safe and quick handling and installation of cast resin busbar product. It shall be read carefully before starting the procedures on the product and relevant steps shall be followed.

#### Things To Do:

- 1. Read the info note on the pallet; lift and handle the the product as shown in "Figure 1" taking the pallet weight into consideration.
- 2. Product shall be hanged and lifted as shown in "Figure 2" while it is handled. (Figure 2)
- 3. Resin and hardener shall be stored as shown in Figure 3
- 4. Busbar route shall be marked before starting the installation.
- 5. Installation shall start from a single point (preferably panel) and shall be completed with the last module
- Do not perform casting before performing megger test on the joint and observing infinite resistance as the result of the test.
- 7. Do not apply expired joint casting agent.

⚠In multipath busbars in high-rise vertical shaft applications; Due to floor heights, floor thickness and product tolerances, the window or additional point alignments on the upper floors may not be the same. In order for the Tap off boxes to be aligned and the joint point not to coincide with the floor transitions, the assembly should be continued by making measurements on each floor.

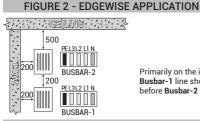

<sup>■</sup> EAE is not responsible for the potential risks that may occur in cases where the products in our catalogue are used outside of the standard phase sequences as shown in the catalogue.

# **▶** Horizontal & Vertical Cast Resin Busbar Applications

#### FIGURE 1 - EDGEWISE APPLICATION

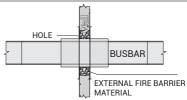

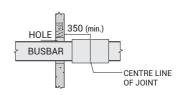

Primarily on the installation phase; Busbar-1 line should be installed

before Busbar-2 line.

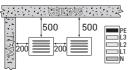

#### FIGURE 6 - SAMPLE WALL CROSSING WITH FIRE BARRIER

#### FIGURE 7 - STANDARD WALL CROSSING

#### FIGURE 3 - FLATWISE APPLICATION

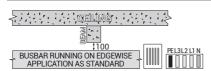

Primarily on the installation phase; BUSBAR-1 line should be installed before BUSBAR-2 line.

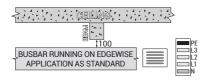

#### FIGURE 8 - EGDEWISE TRENCH APPLICATION

#### FIGURE 4 - CROSSING UNDER A BEAM ON **EDGEWISE APPLICATION**

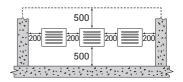

#### FIGURE 5 - CROSSING UNDER A BEAM ON FLATWISE APPLICATION

#### FIGURE 9 - FLATWISE TRENCH APPLICATION

#### FIGURE 10 - FLATWISE TRENCH APPLICATION

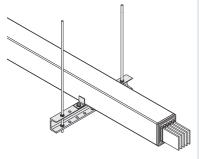

- For correct installation, the dimension from the busbar to the ceiling should not be less than 500mm
- He joint should be not come across to Beams.
- Attention! The dimensions given above are minimum values.
  - All dimensions are given in mm.

# **▶** Equipment Used

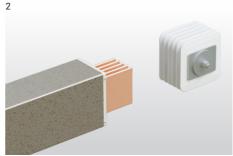

# **▶** Horizontal Edgewise Mounting Application

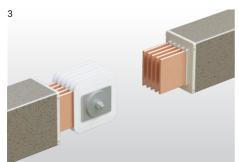

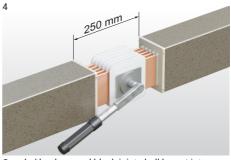

Stretch and head plastic at the tip of the busbar shall be removed.

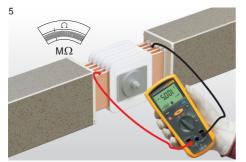

Tip parts exposed on the busbar are required to be cleaned with a clean and dry piece of cloth. After the completion of the cleaning process, It is alinged with the block joint and mounted on the stationary busbar. Block joint bolt shall be slightly tightened for not to falling

Second busbar is brought into alignment with the block joint. The block joint shall be loosened, and the second busbar shall be mounted on the stationary busbar. Bolt clearance is removed tightened slightly.

Coupled busbars and block joint shall be put into final form by looking at the alignments there of. Torqued with the torque wrench by setting to 83 Nm.

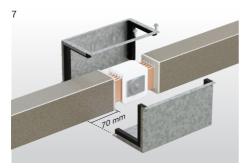

Megger test shall be conducted among the entire phases.

Inner surfaces of molds (surfaces subject to casting process) shall be cleaned with a clean and dry piece of cloth.

# **▶** Horizontal Edgewise Mounting Application

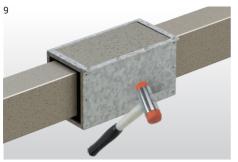

Block joint moulds shall be brought on the coupled busbars and affixed accordingly. Block joint moulds shall be secured on the trays with bolts with a distance of 70 mm from the tip of the busbar.

Alloy shall be casted uninterruptedly from the same spot.

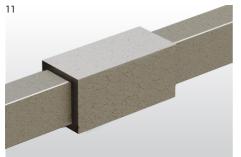

(Please refer to page 22 for alloy preparation guide.)

Vibration is provided by means of plastic hammer.

For each juncture, brushing for 2 minutes shall be performed once in every 10-15 minutes throughout 1 hour.

After the curing of the material (8-24 hours), casting mold shall be removed, and the sharpness of the part shall be smoothed accordingly. (Note: Varies depending on the seasonal conditions and temperature. Cold weather is disadvantageous.)

Megger test should not be conducted for a minimum of 24 hours after the casting process.

# >> Resin Application on Horizontal Edgewise During Assembly

#### ► Horizontal Application

After the entire adjustments are made, megger test and dielectric test shall be conducted on the busbar system coupled and absence of any stray voltage shall be ensured accordingly. Material prepared in buckets shall be casted on juncture area. Material casting shall be ensured not to have any clearance at all. After the completion of casting process, the material shall be ensured to be placed tightly by slightly hammering the block joint moulds.

- After the block joint mould is filled up to the upper level, the surface is required to be levelled out with a brush.
- For the purpose of expediting the air outlet after the completion of the casting process, vibration rendering process shall be applied on the mold for 8-10 minutes by a plastic hammer.
- Casting surface shall be brushed once in every 10-15 minutes and air bubbles forming shall be removed and the surface shall be smoothed accordingly.
- To remove the block joint mould, it shall be waited for curing process of 8-24 hours and the complete stiffening to be completed.
- In case of a requirement of more than 1 dose of application in the application of the juncture resin, it shall be performed successively without waiting for the application of the 2 and the 3 doses

Note: Material for each joint shall be prepared separately and this prepared material shall be poured within 15 minutes.

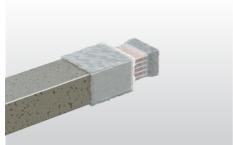

www.eaeelectric.com

# **▶** Horizontal Mounting Application

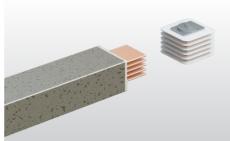

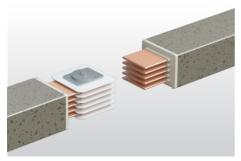

Stretch and head plastic at the tip of the busbar shall be removed.

2

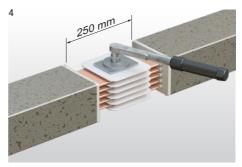

Tip parts exposed on the busbar are required to be cleaned with a clean and dry piece of cloth. After the completion of the cleaning process, it is aligned with the block joint tray and mounted on the stationary busbar. Block joint bolt shall be slightly tightened for not to falling.

3

Second busbar is brought into alignment with the block joint. The block joint shall be loosened, and the second busbar shall be mounted on the stationary busbar. Bolt clearance is removed tightened slightly

Coupled busbars and block joint shall be put into final form by looking at the alignments thereof. Torqued with the torque wrench by setting to 83 Nm.

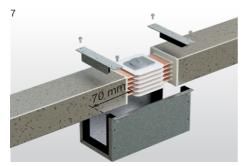

Megger test shall be conducted among the entire phases.

Inner surfaces of molds (surfaces subject to casting process) shall be cleaned with a clean and dry piece of cloth.

# >> Horizontal Mounting Application

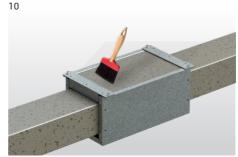

Block joint molds shall be brought on the coupled trays and affixed accordingly. Juncture molds shall be secured on the trays with bolts with a distance of 70 mm from the tip of the busbar.

Alloy shall be casted uninterruptedly from the same spot. (Please refer to page 22 for alloy preparation quide.)

Vibration is provided by means of plastic hammer.

For each juncture, brushing for 2 minutes shall be performed once in every 10-15 minutes throughout 1 hour.

After the curing of the material (8-24 hours), casting mold shall be removed, and the sharpness of the part shall be smoothed accordingly. (Note: Varies depending on the seasonal conditions and temperature. Cold weather is disadvantageous.)

Megger test should not be conducted for a minimum of 24 hours after the casting process.

# **▶** Resin Application Horizontal During Assembly

#### ► Horizontal Application

After the entire adjustments are made, megger test and dielectric test shall be conducted on the busbar system coupled and absence of any stray voltage shall be ensured accordingly. Material prepared in buckets shall be casted on juncture area. Material casting shall be ensured not to have any clearance at all. After the completion of casting process, the material shall be ensured to be placed tightly by slightly hammering the block joint moulds.

- After the block joint mould is filled up to the upper level, the surface is required to be levelled out with a brush.
- For the purpose of expediting the air outlet after the completion of the casting process, vibration rendering process shall be applied on the mold for 8-10 minutes by a plastic hammer.

Note: Material for each joint shall be prepared separately and this prepared material shall be poured within 15 minutes.

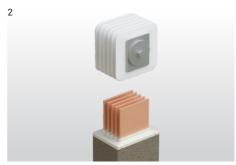

# >> Vertical Mounting Application

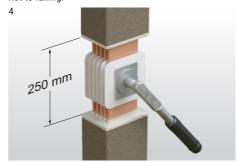

Stretch and head plastic at the tip of the busbar shall be removed.

Tip parts exposed on the busbar are required to be cleaned with a clean and dry piece of cloth. After the completion of the cleaning process, it is aligned with the block joint tray and mounted on the stationary busbar. Block joint bolt shall be slightly tightened for not to falling.

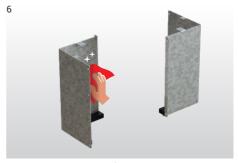

Second busbar is brought into alignment with the block joint. The block joint shall be loosened, and the second busbar shall be mounted on the stationary busbar. Bolt clearance is removed tightened slightly.

Coupled busbars and block joint shall be put into final form by looking at the alignments there of. Torqued with the torque wrench by setting to 83 Nm.

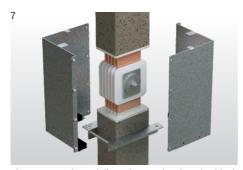

Megger test shall be conducted among the entire phases.

Inner surfaces of molds (surfaces subject to casting process) shall be cleaned with a clean and dry piece of cloth.

# >> Vertical Mounting Application

The support sheet delivered to assist that the block joint mold maintains its position shall be affixed. Block joint molds shall be brought on the support sheet and secured by means of bolts in a manner that the gaskets shall be at the bottom.

The alloy shall be casted uninterruptedly from the sheet that are delivered to assist the casting process from the same spot.

(Please refer to page 22 for alloy preparation guide.)

Vibration is provided by means of plastic hammer.

For each juncture, brushing for 2 minutes shall be performed once in every 10-15 minutes throughout 1 hour.

After the curing of the material (8-24 hours), casting mold shall be removed, and the sharpness of the part shall be smoothed accordingly.

(Note: Varies depending on the seasonal conditions and temperature. Cold weather is disadvantageous.)

Megger test should not be conducted for a minimum of 24 hours after the casting process.

# **▶** Resin Application Vertical During Assembly

#### ► Vertical Application

After the entire adjustments are made, megger test and dielectric test shall be conducted on the busbar system coupled and absence of any stray voltage shall be ensured accordingly. Material prepared in buckets shall be casted on juncture area. Material casting shall be ensured not to have any clearance at all. After the completion of casting process, the material shall be ensured to be placed tightly by slightly hammering the block joint moulds.

- After the block joint mould is filled up to the upper level, the surface is required to be levelled out with a brush.
- For the purpose of expediting the air outlet after the completion of the casting process, vibration rendering process shall be applied on the mold for 8-10 minutes by a plastic hammer.
- Casting surface shall be brushed once in every 10-15 minutes and air bubbles forming shall be removed and the surface shall be smoothed accordingly.
- To remove the block joint mould, it shall be waited for curing process of 8-24 hours and the complete stiffening to be completed.
- In case of a requirement of more than 1 dose of application in the application of the juncture resin, it shall be performed successively without waiting for the application of the 2 and the 3 doses.

Note: Utmost care should be exercised for the alignments in vertical applications. Otherwise, clearances may form on the upper part to risk the juncture accordingly.

www.eaeelectric.com

## **▶** Preparation of Joint Casting Material

Megger test is definitely required to be conducted prior to the casting process.

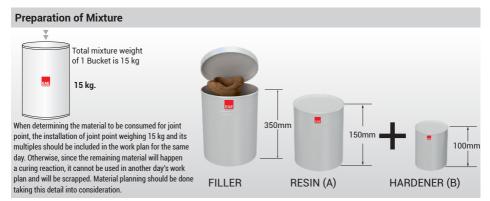

Resin (A), Hardener (B) and fillers; must be stored at least one day over (> 20 °C).

Ambient temperature of job side must be 5°C < T amb <40°C

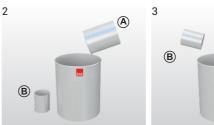

(A)

Resin and hardener are mixed in plastic bucket.

Mix resin and hardener thoroughly with stirrer at least 30-60 seconds.

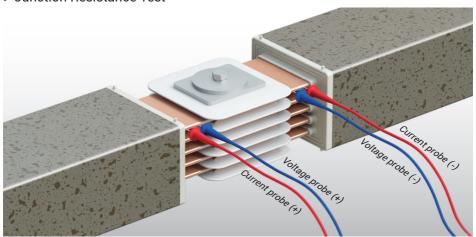

Add fillers and mix until homogeneous; at least 2-3 minutes. Then application must be done within 15 minutes.

# CE DECLARATION OF CONFORMITY

Product Group E-Line CR Busbar Energy Distribution System

Manufacturer EAE Elektrik Asansor End. Insaat San. ve Tic. A.S.

Akcaburgaz Mahallesi, 3114. Sokak, No:10 34522 Esenyurt-Istanbul

The objects of the declaration described below is in conformity with the relevant Union harmonisation legislation. This declaration of conformity is issued under the sole responsibility of the manufacturer.

#### Standard:

#### EN 61439-6

Low-voltage switchgear and controlgear assemblies - Part 6: Busbar trunking systems

#### **CE - Directive**

2014/35/EU "The Low Voltage Directive"

2014/30/EU "Electromagnetic Compatibility (EMC) Directive"

2011/65/EU "Restriction of the use of certain hazardous substances (RoHS)"

#### **Technical Document Preparation Official;**

EAE Elektrik Asansor End. Insaat San. ve Tic. A.S. Akcaburgaz Mahallesi, 3114. Sokak, No:10 34522 Esenyurt-Istanbul

Emre GÜRLEYEN

Date

20.04.2021

### **▶** Certificates

www.eaeelectric.com

#### **▶** Product Overview

# 630A ... 6300A COMPACT BUSBAR PRODUCT OVERVIEW (E-LINE CR)

#### 1- Standards & Certification:

- Busbar trunking system shall be designed, type tested and, manufactured in accordance with the International standard IEC 61439-6. Type test shall be documented by independent and internationally accredited testing and certification bodies. Short circuit type tests shall be conducted by independent and accredited testing and certification bodies. Short circuit type tests and the following 3 main type tests shall be conducted for each current rating of the busbar system and conformity to the standards certificates obtained.

#### 2- General Structure Of The System

The busbar system should be low impedance in accordance with the following characteristics. The tin coated conductors are arranged as a sandwich construction inside the resin body without any air gaps.

#### 2.1-Electifical Characteristics

- Busbar systems nominal insulation voltage shall be 1000V
- As per ampere rates, minimum short circuit values shall be as given below;

#### For Aluminium Conductors:

630A	:	1 sec/rms 20kA, Peak 40kA
A008	:	1 sec/rms 28kA, Peak 58,8kA
1000A	:	1 sec/rms 40kA, Peak 84kA
1250A	:	1 sec/rms 55kA, Peak 121kA
1600-2000-2500A	:	1 sec/rms 70kA, Peak 154kA
2250A	:	1 sec/rms 100kA, Peak 220kA
3000A and above	:	1 sec/rms 120kA, Peak 264kA

#### For Copper Conductors;

800A		I sec/rms 23kA, Peak 48,3kA
1000A	:	1 sec/rms 32kA, Peak 67,2kA
1250A	:	1 sec/rms 45kA, Peak 94,5kA
1600A	:	1 sec/rms 60kA, Peak 132kA
2000-2500A	:	1 sec/rms 80kA, Peak 176kA
3000A and above	:	1 sec/rms 120kA, Peak 264kA

#### 2,2- Housing

- The housing of the busbar system shall be manufactured with specially developed cast material.
- The structure of the busbar lengths shall have conductors tin plated along their complete length within the housing.
- Multi-path busbars should be combined in a single body so that they are not separated from each other
- Up and down, right-left turn elements, "T" and offset elements, panel, transformer and cable connectors, termination, horizontal and vertical expansion elements should be standard in the Busbar trunking system. Special modules and different lengths busbar ducts that may be required during the application of the project must be manufactured in a short time in accordance with standard specifications and technology.
- -If busbar runs pass through the building expansion joint a horizontal expansion element shall be used in the run. In addition horizontal

expansion elements should be used every 40 m along a horizontal run.

#### **▶▶**Product Overview

#### 2.3- Conductors and Phase Configuration

Aluminium or Copper conductors shall be tin plated at the joints upon the wire configration and required numbers, which are described below.

- -Busbar system shall have aluminium conductors between 630A-5000A
- -Busbar system shall have copper conductors between 800A-6300A
- -Busbar system shall have the following number of conductors and wire configuration.
- a) 3 Conductors
- b) 4 Conductors
- c) 5 Conductors
- d) 6 Conductors
- -Neutral conductor shall have the same cross section as the phase conductor cross section.
- -Aluminium conductors shall be of EC grade aluminium. Minimum conductivity shall be 34m/  $mm2.\Omega$ . All surfaces of aluminium conductors shall be tin plated.
- -Copper conductors shall be minimum 99,95% electrolytic copper. Minimum conductivity shall be 56m/mm2.Ω. all surfaces of electrolytic copper conductors shall be tin plated.

#### 2.4- Insulation

-Busbars shall be insulated using a mixture of specially selected silica and calcite mixed with an electrical grade epoxy resin to make a superior composite material. This insulation material must have a high impact resistance against external impacts.

#### 2.5- Modular Joint Construction

- The busbar lengths must be joined together with the joint's point drawer type modular block joint system by placing the conductors in the conductive socket in the block insert. Joint block insulators should be high strength CTP insulators. The joint block's centre bolt should be tightened with a torque wrench set to 83 Nm (60 lb ft) after installation.

#### 2.6- Protection

- Protection degree of the housing and joints shall be IP68.

#### 3- Installation and Commisioning

The installation of the busbar system should be done in accordance with the type and current values shown in these plans in accordance with the electrical project, electrical single line schemes, layout plans and detailed busbar application projects, the manufacturer's installation instructions must be observed carefully during the assembly process. The central joint's bolts must be tightened with the appropriate torque wrench and the nut side of the bolt must be secured with the nut locking cap. After installation of the busbar system the installation should be checked for compliance with the manufacturer's instructions and the requirements of the project, an insulation test should be done. Insulation resistance between all conductors and body has to be bigger than 1 megaohm.
